

# Falls Prevention for Community Care

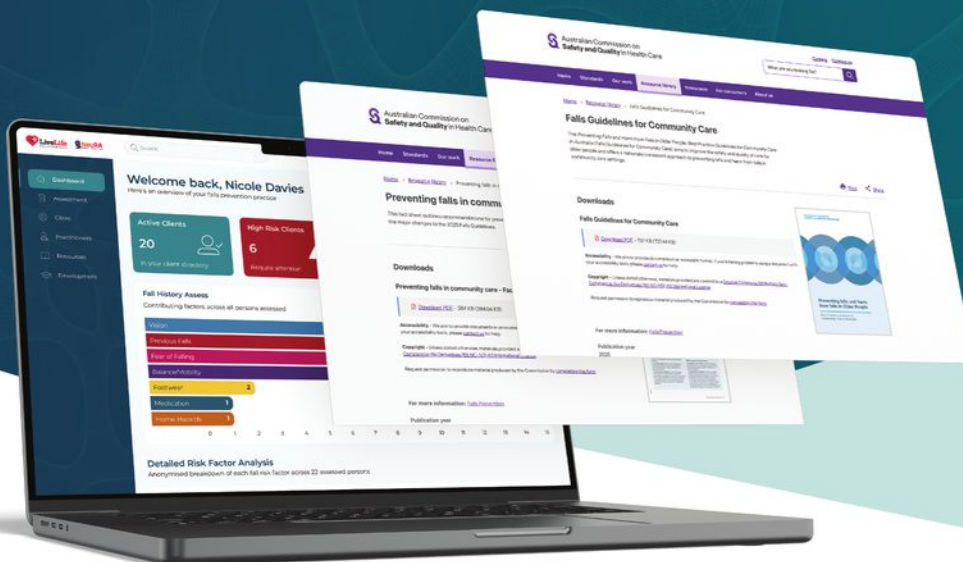

## A digital-first clinical assessment and resource platform

Developed in collaboration with Neuroscience Research Australia (NeuRA) and aligned to the 2025 Falls Guidelines for Community Care by the Australian Commission on Safety and Quality in Health Care

## A complete clinical system for point-of-care assessments

11 clinical domains | 39+ evidence-based resources | Integrated clinical workflow

*Assess faster. Document smarter. Intervene with confidence.*

## Join the Founding Practitioner Program

We are working with clinicians to refine and develop a new structured Falls Prevention system for community care.

**Receive 60 days of complimentary access when the platform launches and help shape the future of evidence-based falls prevention.**

# How the system works in practice

A structured clinical workflow designed to support clinicians during real community and home-based assessments.

## 1. Guided assessment

A structured step-by-step assessment across 11 clinical domains.

Designed to support consistent clinical reasoning during real visits – establishing a baseline with clinical accuracy.

Includes:

- Embedded Short FES-I screening
- Timed mobility assessment (Timed Walk Test)
- Structured clinical prompts
- Complete 11-domain risk coverage

## 2. Real-time clinical structuring

As the assessment is completed, the system organises contributing risk factors across:

- Functional mobility
- Medical conditions
- Environmental risks
- Behavioural contributors

## 3. Intervention linking

Each identified risk connects directly to relevant, evidence-based intervention guidance.

- 39+ clinical resources embedded
- 13 topic areas across falls prevention
- Tailored recommendations based on assessment profile

## 4. Client + carer support

Every intervention is supported with structured education materials designed for real-world use beyond the consultation.

- Practitioner guidance
- Client education materials
- Carer support resources

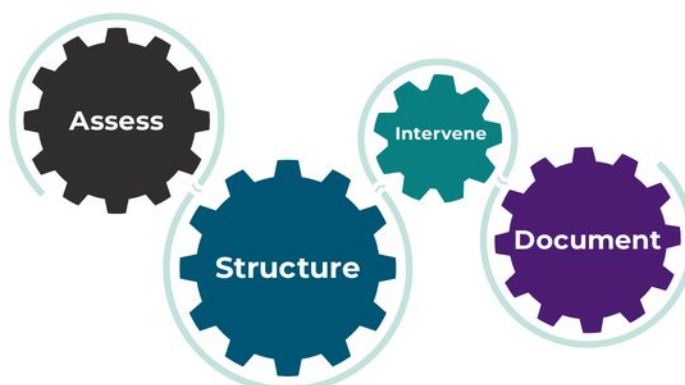

## 5. Clinical outputs

The platform produces structured outputs to support documentation and reporting:

- Referral ready reports
- Report sharing workflows for reduced admin time
- Coming soon: case note summaries for reporting requirements

## 6. Integrated workflow

Everything operates within a single connected pathway:

## Falls risk assessment across 11 clinical domains

LiveLife Falls Prevention structures clinical reasoning into a clear, evidence-based framework aligned to the 2025 Falls Guidelines for Community Care by the Australian Commission on Safety and Quality in Health Care.

Designed for how clinicians assess falls risk in real-world community practice.

### Functional mobility & strength

Supports assessment of movement, strength, and post-fall risk.

Includes key assessment tools such as:

Short FES-I, Timed Walk Test, clinical snapshot, risk stratification.

**Exercise  
& Balance**

**Mobility & Gait**  
(Timed Walk Test)

**Post-fall  
Management**

### Clinical & medical risk factors

Identifies physiological and medical contributors to falls risk.

**Vision**

**Medications**

**Osteoporosis**

**Vitamin D  
& Calcium**

**Dizziness  
& Vertigo**

**Cognitive  
Impairment**

**Continence**

### Environmental & behavioural risk factors

Identifies modifiable environmental and behavioural risks.

**Home Safety**

**Feet & Footwear**

**Fear of Falling**

### Every domain includes:

- Structured assessment prompts
- Evidence-based intervention guidance
- Client education resources
- Referral and reporting support

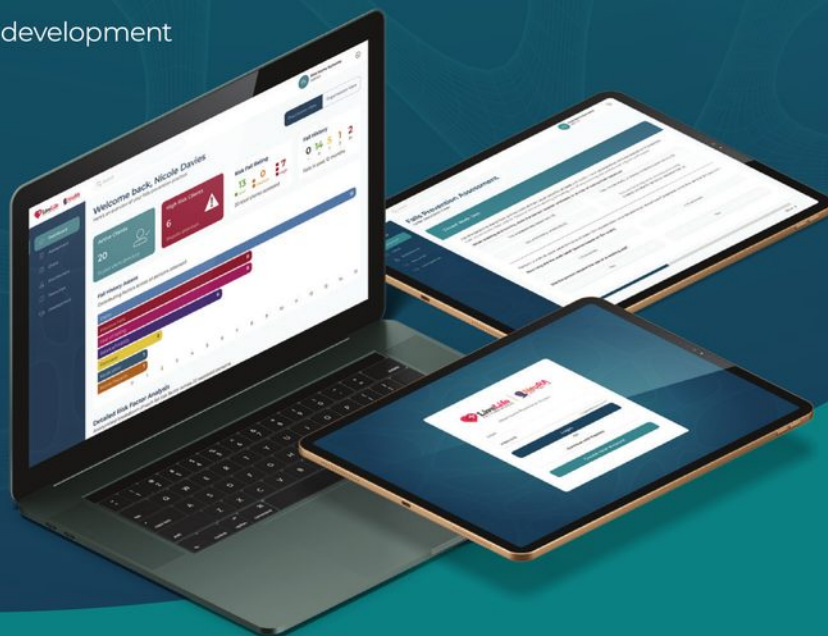

**Professor Stephen Lord**  
Senior Principal Research Fellow, NHMRC

# LiveLife Falls Prevention

## Evidence-based falls prevention assessment + reporting

- Complete access, free for 60 days
- Evidence-based assessment and reporting
- Access to 39+ clinical resources
- Direct input into future platform development

## Join the Founding Practitioner Program

We are working with clinicians to refine and develop a new structured Falls Prevention system for community care.

**Receive 60 days of complimentary access when the platform launches and help shape the future of evidence-based falls prevention.**
